13. ☑ Other: Note the attached "Notice of References Cited" (F	•		

Continuation of 11. does NOT place the application in condition for allowance because:

On pages 10 and 11 of the response, Applicants suggest that the claims were not properly rejected under 35 U.S.C. § 112, 1st paragraph, that there is no basis for the rejection, and the rejection should be withdrawn. As pointed out by the Applicants, while a rejection under 35 U.S.C. § 112, 1st paragraph was suggested in the Final Rejection dated 11/17/05, the rejection was never formally made. Thus, the arguments on pages 10-11 are moot.

On page 12, Applicants address issues surrounding the 2/28/05 IDS and presents an updated IDS (1/17/06) to correct the deficiencies of the prior IDS. New citations of US Patent documents have been considered. Applicants suggest that page 72 of the 2/28/05 reference AQ is not "illegible". However, further review of the reference shows that this page is indeed quite illegible. The 1/17/06 IDS contains another copy of this reference with another page 72, which is likewise illegible. Regardless of the source of the document, it does not comply with the requirements of 37 CFR 1.98(a)(2) and cannot be considered. However, a complete and legible copy of Applicant's document has been located via the Internet. This copy is being submitted with a PTO-892 "Notice of References Cited" form and as such has been considered.

On pages 14 and 15, Applicants essentially argue that the Sun WBEM reference does not disclose retrieval of instance element identifiers. However, this limitation was addressed in the Final action on page 7 and can be found in Sun WBEM at the bottom of page 36. Further, the originally filed specification does not appear to expressly provide a definition for an "element identifier". Thus, this argument is not convincing.

On pages 15-16, Applicants essentially argue that "Sun WBEM does not provide any National Language Support (NLS) as taught and claimed by Applicants." However, it is noted that the features upon which applicant relies (i.e. "NLS") are not recited in the rejected claims. Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See In re Van Geuns, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

On page 17, Applicants essentially argue that the Tett reference does not teach "replacing a name retrieved from a management data definition with a qualified value." However, the claim simply calls for "replacing the retrieved name with the qualifier value prior to the displaying". As addressed in the Final Office Action, Sun WBEM discloses the elements of a "retrieved name" and a "qualifier value". It does not disclose replacing one with the other. Tett teaches that retrieved names can be replaced with a value in order to enhance communication. Thus, Applicants' argument is not convincing.

On pages 18 and 19, Applicants essentially argue that the CIM Specification reference does not teach "non-propagated keys". However, this reference was not relied upon for this teaching. As addressed in the Final Office Action on page 12, the CIM Mapping reference teaches this limitation at the top of page 7. Thus, Applicants' argument is not convincing.

On page 20 with regard to claims 4, 11, and 18, Applicants essentially argue that Tett does not teach "replacing a name retrieved from a management data definition with a qualifier value." However, this argument appears to be directed to limitations found in claims 1, 8, and 15, respectively. As suggested above, Tett is not relied upon for teaching the management data definition or a qualifier value, but is relied upon to teach replacing a name with a value. Applicants' further argue that Tett does not teach "retrieving". However, this limitation is disclosed by Sun WBEM as addressed on page 6 of the Final Office Action. Thus, Applicants' argument is not convincing.

On page 21, Applicants essentially argue that Tett does not teach a "pre-defined display name". However, Applicant acknowledges that Tett teaches the use of a custom dictionary. The dictionary can be interpreted as providing pre-defined display names. Thus, Applicants' argument is not convincing.

On page 22, Applicants essentially argue that there is no motivation to combine Sun WBEM with Tett, and that the rejections made with the references were based upon hindsight reasoning. These arguments are not convincing for the same reasons set forth on pages 3 and 4 in the Final Office Action.

Claims 1, 2, 4-9, 11-16, and 18-28 remain rejected as addressed in the 11/17/2005 Final Office Action.
